Searca Notes

Protein Sequence Searches – February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (uniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

shirimate kinase.
Lycopersicon esculentum (tomato)
Lycopersicon esculentum

Eukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta;
Spermatophyta; Magnoliophyta; eudicotyledons; core eudicots;
asterids; lamiids; Solanales; Solanaceae; Solanum; Lycopersicon.

E 1 (bases 1 to 123)
Schmid,J., Schaller,A., Leibinger,U., Boll,W. and Amrhein,N.
The in-vitro synthesized tomato shikimate kinase precursor is enzymatically active and is imported and processed to the mature
enzyme by chloroplasts

On Dec S. 2003 this sequence version replaced gi:26452805.
An Arabidopsis full-length cDNA library was constructed essentially
as reported previously (Seki et al. (1998) Plant J. 15:707-720,
Seki et al. (2002) Science 296:141-145). cDNA cleaved with BamHI
and Xhol was ligated to modified Lambda FLC-1-E vector (Carninci et
al. (2001) Genomics 77:79-90) digested with BamHI and Sall.
This clone is in a modified pBluescript vector.

(1998) Plant J. 15:707-720; Seki et al. (2002) Science 296:141-145). cDNA cleaved with BamHI and XhoI was ligated to modified Lambda FLC-1-E vector (Carninci et al. (2001) Genomics 77:79-90) digested with BamHI and Sall. This clone is in a modified pBluescript vector.

The nuclocitide sequence of this BAC clone was generated by combining Monsanto and RGP-Japan sequencing data.

NOTE: It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

Gequence database at RGP or DDBJ. Protein homologics of the coding
regions were searched against NGBI NonRedundant Protein database
with BLASTP. ESTs represent the identified cDNA sequences using
BLASTN with the corresponding DDBJ accession no. and RGP clone ID.
Pull-length cDNAs represent the identified cDNA sequences using
squence database at RGP or significant homology to a protein a gene prediction program is also classified as a
classified based on the protein but with full-length of partial
squences as ame name, 'putative' and 'like perform' perform' protein accession no.
A gene with identity or significant homology (covering almost the entire length of partial
squence is classified as an 'unknow' protein. A gene predicted by a single gene prediction pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   join(<747. .1033,1549. .1595,1683. .1737,1842. .1914,

```
The invention comprises DNA sequences which confer an altered metabolic characteristic when they are expressed in a plant. The DNA sequences of the invention are useful for producing plants with an altered metabolic characteristic, such as: altered acid metabolism, alcohol metabolism, altered detabolism, altered detabolism, altered phenolic metabolism, altered phenolic metabolism, altered phenolic metabolism, altered phenolic metabolism, altered seter metabolism, altered sterol, oxygenated terpene, or isoprenoid metabolism, con quinone metabolism. The DNA sequences of the invention may be used to provide disease resistance in a plant and gene shuffling or sexual PCR procedures. The present nucleic acid represents a DNA sequence of the invention.
Novel genes that confer altered metabolic characteristics in Nicotiana benthamiana plants, useful for altering the levels of metabolites e.g. acids, fatty acids, amino acids, carbohydrates, hydrocarbons and sterols.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     quinone metabolism; disease resistance; gene shuffling; sexual PCR; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention comprises DNA sequences which confer an altered metabolic characteristic when they are expressed in a plant. The DNA sequences of the invention are useful for producing plants with an altered metabolic characteristic, such as: altered acid metabolism, alcohol metabolism, fatty acid metabolism, branched fatty acid metabolism, alkaloid or other base metabolism, altered amino acid metabolism, altered ester metabolism, altered amino acid metabolism, altered ester metabolism, altered station acid metabolism, altered station acid metabolism, altered station acid metabolism, altered station, oxygenated terpene, or isoprenoid metabolism, alkene or alkyne metabolism, hydrocarbon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       benthamiana plants, useful for altering the levels of metabolites e.g. acids, fatty acids, amino acids, carbohydrates, hydrocarbons and sterols.
                                                                                                                                                                                                                                                                                                                                                                                              Plant DNA sequence which confers altered metabolic characteristic #5640.
                                                                                                                                                                                                                                                                                                                                                                                                                 altered metabolic characteristic; plant; acid metabolism; alcohol metabolism; fatty acid metabolism; branched fatty acid metabolism; alkaloid metabolism; anino acid metabolism; ester metabolism; glyceride metabolism; phenolic metabolism; carbohydrate metabolism; sterol metabolism; terpene metabolism; carbohydrate metabolism; alkene metabolism; alkyne metabolism; hydrocarbon metabolism; ketone metabolism; quinone metabolism; disease resistance; gene shuffling; sexual PCR; ds.

The invention comprises DNA sequences which confer an altered metabolic characteristic when they are expressed in a plant. The DNA sequences of the invention are useful for producing plants with an altered metabolic characteristic, such as: altered acid metabolism, alcohol metabolism, fatty acid metabolism, alcohol metabolism, altered acid metabolism, altered ester metabolism, altered amino acid metabolism, altered ester metabolism, altered anion acid metabolism altered ester metabolism, altered sterol, oxygenated terpene, or isopremoid metabolism, altered sterol, oxygenated terpene, or isopremoid metabolism, altered sterol. sexual PCR procedures. The present nucleic acid represents a metabolism, ketone or quinone metabolism. The DNA sequences of the invention may be used to provide disease resistance in a plant and DNA sequence of the invention. shuffling or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to 17880 cotton expressed sequence tags (ESTs; ACN6520-ACN63099). The ESTs were isolated from cDNA libraries generated from primed or non-primed seeds from variety DPSOB, mature seeds from variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium tissue, developing fibres, carpel walls and septa from variety Nucotton33B. The invention also relates to substantially purified proteins or their fragments encoded by nucleic acid molecules of the invention, and to transformed plants having a nucleic acid construct comprising a nucleic acid of the invention. The cotton ESTs are useful as molecular tags to isolate genetic regions, to isolate genes, to map genes, to determine gene function and to determining whether genes are members of a particular gene function and to determining whether genes are used for isolating a variety of agronomically significant genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid molecule that encodes a plant protein or its fragment, useful for isolating a variety of agronomically significant genes associated with plant growth, quality or yield, and as molecular

cassociated with plant growth, quality, yield, and could also serve as links in metabolic and catabolic pathways. The nucleic acid molecules are also useful for identifying genes important in initiating and maintaining seed germination or that may be used to mitigate stresses encountered during seed germination. The ESTs additionally enable the acquisition of promoters and cis-regulatory elements which will be useful to express agronomically significant genes in these tissues and/or other tissues, and also permits the acquisition of molecular markers useful in breeding schemes, genetic and molecular mapping, and in cloning of agronomically significant genes. The nucleic acid molecules are further useful for detecting the expression level or pattern of a protein or mRNA and for detecting the presence or quantity of a protein by tissue printing. The present sequence represents a specifically claimed EST isolated from a cotton variety Nucotton33B androedium tissue cDNA library (LIB3828). The sequence data for this patent did not form part of the printed conscious, but was obtained in electronic format directly from the US patent office at sequence.html?DocID=US20040123340
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              514
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              744
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        513 acrarargeagaagaagagarrerrerregiragargracerregaageerregeae 454
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            804
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             453 AAAGGATTGCTGCAGTAGGTACTCATTCTCGTCCCTTTTGCATTATGAAGATGGTGATC 394

Also a recombinant polypeptide comprising any of the 88798 amino acid sequences mentioned in the specification and producing a plant having an improved property. Producing a plant having an improved property comprises transforming a plant with a recombinant construct comprising a promoter region functional in a plant cell operably joined to a polymucleotide comprising a comprise of a plant with a recombinant construct comprising a plant with a recombinant construct comprising a polymucleotide comprising a polymucleotide comprising a coding sequence for a polypeptide associated with the property, and growing the transformed plant. The polypeptide is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New recombinant nucleic acid molecules and polypeptides from Gossypium

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a recombinant polymucleotide comprising any of the 58798 Cotton plant cDNA sequences mentioned in the specification.

Also a recombinant polypeptide comprising any of the 58798 amino acid sequences mentioned in the specification and producing a plant having an improved property.

Comprises transforming a plant with a recombinant construct comprising a promoter region functional in a plant cell operably joined to a sociated promoter region functional in a plant cell operably joined to a seciated polymucleotide comprising a coding sequence for a polypeptide associated with the property, and growing the transformed plant. The polypeptide is useful for improving plant cold tolerance, manipulating growth rate in plant cells by modification of the cell cycle pathway, improving plant councing galactomannan for lighin or plant growth regulators, improving plant tolerance to extreme osmortic conditions or peaks, improving plant tolerance to extreme osmortic conditions or to pathogens or peaks, improving plant companion in plants, improving plant tolerance to extreme osmortic conditions or to pathogens or peaks, improving yield by modification of photosynthesis, modifying seed oil or protein yield and/or content, improving yield by modification of carbohydrate, nitrogen or plant growth and development under at least one stress condition. The polymucleotide and polypeptide may also be used in recombinant DNA content content can are an lusic severame of constructs, in physical arrays of modecules, as plant breeding markers, constructs, in a plant promoter promoter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               423

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              or in computer-based storage and analysis systems. The present sequence is a Cotton plant cDNA of the invention. NOTE: The sequence data for thi patent did not form pare printed specification, but was obtained in electronic format directly from USPTO at sequence. Over the sequence of the property of of t
                                                                                                                                                                                                                                                                                                                                                                                                                         New recombinant nucleic acid molecules and polypeptides from Gossypium hirsutum, useful for producing plants with improved biological characteristics (e.g. improved plant cold or drought tolerance).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TTGACGAAGCTCTCCTGTTGAAGAGAAAATCAGAAGAAGTTCTGTTCTACTTGAACGGGA

useful for improving plant cold tolerance, manipulating growth rate in plant cells by modification of the cell cycle pathway, improving plant drought tolerance, providing increased resistance to plant disease.

producing galactomannan for lighth or plant growth regulators), improving plant tolerance, improving plant tolerance to herbicides, increasing the rate of homologous recombination in plants, improving plant tolerance to extreme osmotic conditions or to pathogens or pests, improving yield to extreme osmotic conditions or to pathogens or pests, improving yield and/or content, improving yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, or improving yield by providing improved plant growth and development under at least one stress condition. The polymuclectide and polypeptide may also be used in recombinant DNA constructs, in physical arrays of modecules, as plant breeding markers, or in computer-based storage and analysis systems. The present sequence is a Cotton plant cDNA of the invention. NOTE: The sequence data for this patent did not forme directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 TCTACTGGCGGAGGTGCACTGTACGGGATGTGGAACTAGGGACTATATGCAGAAGAAGAAGGGG 120
